## About Me

---

As soon as I ran my first function in JavaScript, I was already hooked into the world of web development. Web development isn't "just a job" to me. It's a creative outlet for me to create high-quality web apps while continually improving my skills and learning new technologies.

Below you'll see find projects I've completed that showcase my skills and general background in developing web apps.

## Experience

---

### BlackJax ([visit](#))

A recreation of the game "BlackJack" in the form of a web app experience. Practice your skills, earn points and see how you place on the leaderboard to see how you compare to other players.

### Internet Flicks ([visit](#))

An online database of information relating to movies, TV shows and cast members. This project utilizes the TMDb API. The UI is inspired by the streaming service, Netflix.

### BlackJax API ([visit](#))

This RESTful API allows for users to create accounts which will be stored using MongoDB. Sensitive user data is prevented from leaking during API calls. bcrypt is used to encrypt user passwords.

### Restaurant Landing Page ([visit](#))

John Daniel's, the place to get the best burgers in Dubai (this is based in a real restaurant). This is a mockup landing page for a restaurant to answer the most common questions from current and potentially new customers for high conversion rate.

## Skills

---

**Programming Languages:** JavaScript(ES6+), HTML, CSS/Sass

**Libraries & Frameworks:** React, Node.js, Express

**Other:** Git/Github, Heroku, Netlify, Vercel, Figma, Photoshop
